Why this is Important to Investors

Straight line depreciation allows investors to deduct the cost of a commercial property evenly over a 39 year period, creating a consistent annual tax shelter that reduces taxable income without affecting cash flow.

A cost segregation analysis enhances this benefit by identifying portions of the property such as mechanical systems, electrical, plumbing, and site improvements that can be depreciated over shorter lives, typically 5 or 15 years.

By accelerating depreciation into the early years of ownership, cost segregation can materially increase near term tax deductions and tax savings, improving after tax cash flow and overall investment returns. For many investors, especially those with significant taxable income, cost segregation can meaningfully enhance the economics of an acquisition compared to straight line depreciation alone.
